The Sesame Seed Project aims to make design more accessible using the principles of the Open Source Initiative. At www.thesesameseedproject.cc you can download designs and build them at home using affordable standard sections of wood and basic DIY tools giving you access to low cost high value design.

Originally just a project to furnish a new flat on a tight budget, Sesame Seed became a design exercise to see what could be achieved within the tightest constraints, an exercise that produced the Homage Chair. Largely inspired by the work of Enzo Mari's Autoprogettazione, the Sesame Seed website tries to progress this work by using the Internet and social media to allow DIY designs to be more accessible.
